Overview

The NIATx Model and the Impact

Lessons Learned from Three Pilot Studies

Process Measures at the Interface of Criminal Justice and Behavioral Health

Questions and Answers

The NIATx Model and the Impact

Why is it hard for People in the Justice System to have successful community re-entry?

- They are just bad people, it's impossible to rehabilitate them?
- They are addicts and they can't help themselves?
- The community providers are useless?

W. Edwards Deming

85 percent of the problems that organizations have in serving customers are caused by their processes

NIATx™

Process Improvement

Customers (people in the justice system) are served by **processes**.

85 percent of customer (people in the justice system)-related **problems** are caused by processes.

You must improve your processes to better serve **customers** (**people in the justice system**).

Five Key Principles

Evidence-based predictors of change

1. Understand & Involve the Customer (people in the justice system)
2. Focus on Key Problems
3. Select the Right Change Agent
4. Seek Ideas from Outside the Field and Organization
5. Do Rapid-Cycle Testing

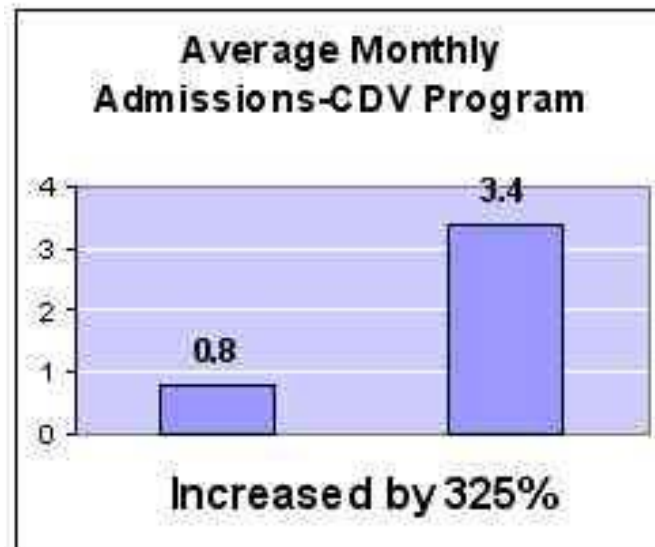

Example

ALPHA Counseling SC

Aim: Increase percent of criminal domestic violence referrals that become clients

Pilot 1: Changed process so that staff attended court to schedule appointments onsite

Pilot 2: Streamlined intake process so that it could be completed at the court

Four Original Aims

Reduce Waiting Times

Reduce No-Shows

Increase Continuation

Increase Admissions

Lessons Learned from Three Pilot Studies

Three Pilot Sites

In 2011, the CSG Justice Center and NIATx started work with three pilot sites:

- Dekalb County, GA,
- Durham County, NC,
- the State of Maryland

Recommendations were developed to help criminal justice and substance use treatment systems to improve transitions between institutional and community care

Recommendations from Site Work

1. Collaborate Across Systems
2. Increase Communication and Information Sharing
3. Reduce Duplication of Efforts and Streamline Processes
4. Monitor the Process Improvements and Focus on Data Collection

Collaborate Across Systems

- *Joint participation and buy-in from executive and front-line staff is key to implementing changes in business practices*
- *Timely access to treatment services is critical*
- *Establish walk-in appointments*
- *Monitoring clients' participation can help them succeed in treatment; in addition, partner with community corrections to coordinate post-release treatment*

Opportunities to Increase Coordination

- Cross training staff
- Co-location of staff
- Partnership between community supervision officers and treatment providers to promote treatment compliance

Increase Communication and Information Sharing,

- *Have a shared language and clear terminology*
- *Focus on the customer*
- *Increase communication across systems to increase timely access to treatment*
- *There should be communication related to release date and participation in treatment*
- *Make information exchange easier*

Reduce Duplication of Efforts and Streamline Processes

- *Communicate with staff to avoid fear of role reduction*
- *Streamline the referral process*
- *Avoid duplication of efforts through increased access to shared information*

When Referral Process Go Wrong, Consequences Are Significant

- Clients will not attend an appointment or make the necessary arrangements to attend (including transportation, child care, or time off of work) just to repeat what they did with the probation officer or the jail or prison treatment staff.
- Multiple steps delay care. Eliminating multiple assessments gives staff time for other work; creates more capacity in the system; and reduces the time clients have to wait for services.

Monitor the Process Improvements and Focus on Data Collection

- *Focus on one “change project” at a time*
- *Measure and assess “change project” data*
- Led to the development of process measures at the interface of behavioral health and criminal justice

Process Measures at the Interface of Criminal Justice and Behavioral Health

*Sexually transmitted infections include: HIV, AIDS, Hepatitis C, Chlamydia, gonorrhea, and syphilis.

*Correctional population numbers came from: Taxman et al. (2007), supplemented by information on federal prisoners, probationers, and parolees from the Bureau of Justice Statistics' "Prisoners in 2007" and "Probation and Parole in 2007" (available at <http://www.ojp.usdoj.gov/bjs/correct.htm>).

*People in the Justice System health status numbers came from: Taxman, F., Cropsey, K., & Gallagher, C. (under review).

Guiding Principles of Interface Measures

- **Collaboration.** The many different agencies that make up the criminal justice and behavioral health systems in each jurisdiction must work *collaboratively* to ensure that there is treatment available for people involved in the justice system who have substance use disorders, mental disorders, or co-occurring substance use and mental disorders.
- **Access and Retention.** Jointly facilitating *access* to and *retention* in behavioral health services by criminal justice and behavioral health partners is essential for achieving better behavioral health outcomes for people involved with the justice system.
- **Options for Care.** Individuals in the justice system who have behavioral health needs should have access to the *appropriate level of care*.
- **Process Measurement.** *Process measures* provide the means to assess whether partners (justice, behavior health, or both) have met their goals of providing access to, retaining, and completing the appropriate level of care for people who have behavioral health disorders.
- **Quality and Joint Accountability.** Process measures can promote *quality and joint accountability* in the delivery of substance use and mental disorders services.

CJ & Treatment Interface

Client

Treatment Interface

Parole

Sequential Intercept

- Screening
- Assessment
- Referral
- Placement
- Initiation
- Engagement
- Retention
- Completion

4 Types of Process Measures

- **Identification and Referral (Systems Level):** How well does the system do at facilitating interface?
- **Engagement and Completion (Individual Level):** How well does the client do at accessing care?
- **Recovery Management (Individual Level):** How well does the client do in care or managing recovery?
- **Access Measures and Systematic Responsivity (Systems Level):** How well does the system do at providing access to appropriate levels of care?

Set 1: Identification and Referral (Systems Level)

Screening Rate

Percentage of arrestees, defendants, inmates, probationers/parolees who **screened positive** for **behavioral health issues** using a validated screening tool.

Screening Rate

■ Arrestees (15%) ■ Defendants (20%) ■ Inmates (25%)
■ Probationers/Parolees (40%)

Clinical Assessment Rate

Percentage of arrestees, defendants, inmates, probationers/parolees **clinically assessed** using a validated assessment procedure as needing **behavioral health services**

Clinical Assessment Rate

Referral Rate

Percentage of arrestees, defendants, inmates, probationers/parolees **screened or assessed** for behavioral health disorders that are **referred** to a treatment program or **linked**

Referral Rate

Initiation

Percentage of arrestees, defendants, inmates, probationers/parolees referred to **behavioral health services** that start services within 14 days of the screening or clinical assessment

Initiation

■ Arrestees (5%) ■ Defendants (13%) ■ Inmates (32%)
■ Probationers/Parolees (50%)

Set 2: Engagement and Completion (Individual Level)

Engagement

Participates in at least **two** treatment sessions within a **30-day period** of initiation

Retention

Length of stay in treatment for **different levels of care** including outpatient therapy, intensive outpatient therapy, therapeutic community, and counseling services

Completion

Percentage of arrestees, defendants, inmates, probationers/parolees who **successfully** complete treatment

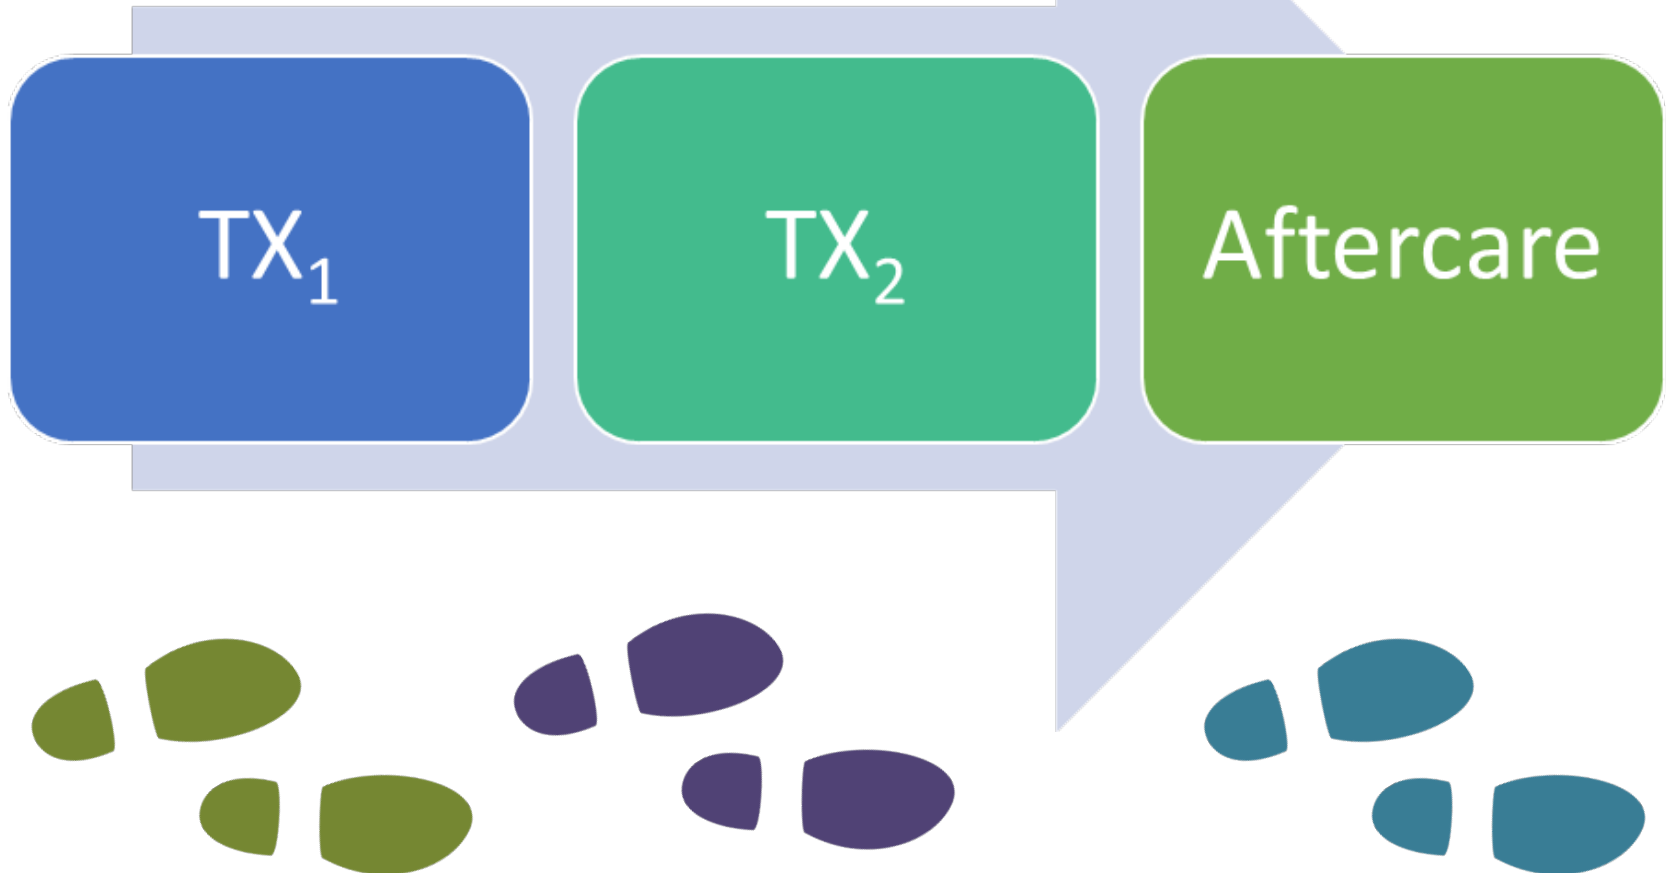

Successful Completion Rate

■ Arrestees (5%) ■ Defendants (8%) ■ Inmates (45%)
■ Probationers/Parolees (42%)

Set 3: Recovery Management (Individual Level)

Continuum of Care

Set 4: Access Measures and Systematic Responsivity (Systems Level)

Insurance Enrollment

Percent of individuals **involved in the justice system** who are enrolled in health

Percent of individuals **released from prison or jail** who are enrolled in health insurance

The **Affordable Care Act (ACA)** extended Medicaid eligibility to all adults whose annual income is less than \$16,243¹

- Up to 30% of individuals released from jails could enroll in Medicaid in states that expand the program²
- In 2011, 80% of former inmates in Massachusetts were continuously enrolled in Medicaid during the first year after their release¹

Which justice-involved individuals are eligible for coverage under the ACA?

Status	Marketplace	Medicaid
Pretrial but not detained	Yes	Yes
Pretrial, detained	Yes, depending on specific plan requirements	No (unless he or she receives inpatient treatment outside the jail – see below)
Sentenced but not detained	Yes	Yes
Sentenced and incarcerated	No	No (unless he or she receives inpatient treatment outside the jail –

[http://www.naco.org/sites/default/files/documents/QandA-ACA%20Inmate%20Healthcare-OCT2014%20\(2\).pdf](http://www.naco.org/sites/default/files/documents/QandA-ACA%20Inmate%20Healthcare-OCT2014%20(2).pdf)

States Suspending Medicaid

Suspension of Medicaid Benefits upon Incarceration: At least 12 states have laws or administrative policies to suspend Medicaid enrollment of inmates.

Evidence Mapping | Assess Ind./Est. Recidivism Reduction | Rate Your Jurisdiction's Program | Assess Jurisdiction's Cap./Est. Recidivism Reduction | Estimate Cost Savings | SOARING 2

Criminal Justice - Targeted Research and Application of Knowledge (CJ-TRAK) Portal

Translating the evidence-based practices (EBP) to everyday operations is important. EBP or the "what works" approach is the foundation of effective corrections.

LOG IN OR CREATE ACCOUNT

The SOARING 2 program controls and services based on desired outcomes. The tool can also be used for an individual client/offender.

SOARING 2 is a suite of tools to help learn about the EBP concepts.

<http://www.gmuace.org/tools/>

Assess An Individual

Assess offenders or estimate the reduction in recidivism by matching individuals to treatment programs.

LAUNCH

The RNR Program Tool For Adults

Assess your current programs based on treatment offered, content, quality, and other factors.

LAUNCH

Assess Jurisdiction's Capacity

Use client population data & current programming to identify programs that meet your population's needs.

LAUNCH

SOARING2

A suite of tools to help learn about the EBP concepts.

LAUNCH

Evidence Mapping

View synthesized data from meta analyses and systematic reviews on what works in corrections and health.

LAUNCH

This product was developed with partners from the University of Massachusetts, Lowell; Maxarth, LLC; and Stonky, LLC. We have a collaboration of Universities that assisted in the evidence-mapping component.

What are the Probationer Needs?

Female Population Needs

Higher rates of drug abuse; different pathways to offending

Where possible, conduct gender-specific groups

Program Availability

Current Distribution

ADP Estimated Responsivity Rate

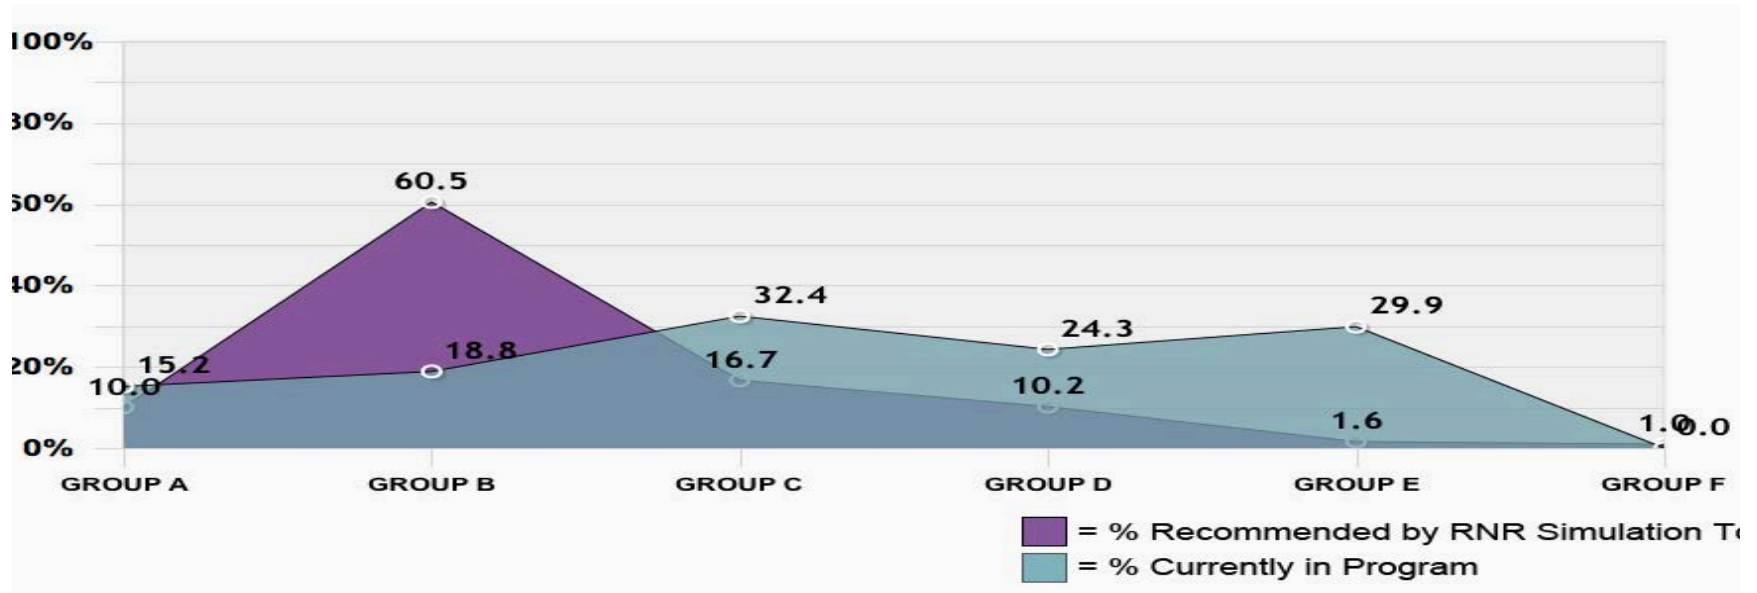

- Greatest unfulfilled needs are cognitive restructuring programs, mental health, co-occurring disorders, and substance abuse

Responsivity Rate for Females

- Higher rates of substance dependence than males; similar need for cognitive restructuring, mental health, co-occurring disorders programs
- Limited gender-specific treatment available

Responsivity Rate for Young Adults

- APD clients age 18-27: lower rates of substance dependence; VERY high rates of criminal thinking, resulting in pronounced gap

Why do we need process measures?

- Holds systems accountable
 - If you do not screen, you can assess or place with fidelity
 - If people do not have insurance, then the programming options are limited
- Some measures can be “warning signs”
 - Engagement predicts reduction in rearrest (Garnick, et al 2014)
 - Treatment Completion predicts reduction in recidivism (Wexler, et al 1998)
- Systems improvements can be earmarked!
