Collaborative Comprehensive Case Plans: Addressing Criminogenic Risk and Behavioral Health Needs

The **Criminogenic Risk and Behavioral Health Needs framework** (see below) introduced state leaders and policymakers to the concept of prioritizing supervision and treatment resources for people based on their level of criminogenic risk and needs and the severity of their behavioral health needs. Once these individuals are identified, criminal justice and behavioral health professionals can work together to develop and implement case plans that assist the participants in reducing their risk for recidivating and advancing their goals for recovery. The following tools and resources will help these professionals integrate critical behavioral health and criminogenic risk and needs information into comprehensive case plans that actively engage the participant and reflect a balanced and collaborative partnership between criminal justice, behavioral health, and social service systems.
