OVERVIEW

1. ADDITIONAL RESEARCH:
   JAIL and DOC DETAINEE
   RELEASE DECISION MAKING

2. ADDITIONAL RESEARCH:
   HOC POPULATION

3. ADDITIONAL RESEARCH:
   DOC POPULATION

4. ADDITIONAL RESEARCH:
   DEMOGRAPHIC ANALYSIS OF
   INCARCERATED POPULATIONS

5. ADDITIONAL RESEARCH:
   CWOF FOLLOW-UP ANALYSIS
Data used in this analysis was provided upon request by Hampden, Middlesex, and Essex counties. These counties were selected for a sample of jail data due to the size of their populations as well as their geographic representation. General information on demographics and governing offense types was included as well as admission and release dates, type of admission, status at release, and bail information. DOC also provided information on pretrial detainees including admission and release dates.
Jail data acquired for this analysis is a sample of the total jail population.*

The Justice Center requested and received three county data sets and DOC detainee data, representing approximately 40% of the detainee population statewide.

Middlesex, Essex, and Hampden Counties were included in the sample due to the size of their populations, geographic representation, and the scope of data these counties collect electronically at their jails.

*Over 90% of males admitted as a DOC detainee are 52As—people charged with a new offense who have previously served a state prison sentence.

Females admitted as a DOC detainee are transferred from counties that do not have a designated capacity for females. Hampden County operates a regional facility that serves females in Hampden County and surrounding areas, mostly Hampshire and Worcester County.

Department of Correction Weekly Count Sheets, Jan 1, 2015; CSG Justice Center analysis of FY2014 Middlesex, Essex and Hampden county jail data and DOC data.
Female admissions to jail have increased nearly 40 percent in sampled facilities.

Females admitted as a DOC detainee are transferred from counties that do not have a designated capacity for females. Hampden County expanded capacity in FY2015 by opening a regional facility accepting females from surrounding jurisdictions, the majority from Hampshire and Worcester counties.

The number of male Hampden County jail admissions and DOC detainees declined during the same period. Over 90% of males admitted as a DOC detainee are 52As—people charged with a new offense who have previously served a state prison sentence.
Despite increases in the female pretrial population, female county sentenced admissions have remained stable.

Increases in female jail admissions have not correlated with increases in sentenced admissions for females.

Admissions for drug charges had the largest increase of all offense categories for females admitted to Hampden County jail

2015 was not included due to significant changes in female populations in Hampden County due to expanded capacity. CSG Justice Center analysis of FY2011-2014 Hampden County jail data.

Male admissions to Hampden County jail for drug charges increased 11% during the same time period.

The average length of stay for women released from Hampden County jail or DOC pretrial was approximately 27 days.*

*27 days for women released from DOC pretrial and 28 days for women released from Hampden County jail.
In sample counties, admissions to county jails for drug charges increased considerably more than admissions for other charges.

The average length of stay in jail for admissions for property and drug charges was more than 45 days.

*2015 was not included due to significant changes in female populations in Hampden and Essex Counties due to expanded capacity.

CSG Justice Center analysis of FY2011-2014 Middlesex, Essex and Hampden county jail data.
Statewide HOC data included in this analysis was obtained from the Parole Board’s SPIRIT database and includes information on commitments and commitment closures statewide. This data was combined with parole supervision data, also obtained from the Parole Board, to create a release date as well as a return date for parole violators. Criminal Offender Record Information (CORI) data was incorporated in order to categorize the governing offense type as well as identify commitments based on noncriminal behavior. The SPIRIT data should be considered a “proxy” for HOC populations. The data captured in SPIRIT is not entered or maintained by sheriffs’ offices. The database primarily functions through the lens of parole and parole eligibility, not as a case management system for HOC facilities. Additional county-level HOC data in this analysis was provided upon request from Middlesex, Essex, and Hampden counties.
Statewide, HOCs had approximately three times the number of admissions as DOC each year.

Admissions to HOC and DOC* FY2011–FY2015

Admissions mirror the differences in volume of court activity between district and superior court.

*Admissions to both DOC and HOC include new court commitments, parole and probation revocations. Council of State Governments Justice Center analysis of FY2011-2015 Parole Board’s SPIRIT HOC data and DOC data.
Between 7 and 15 percent of HOC admissions in sample counties were serving a sentence of less than 60 days.

The average length of stay in jail for individuals who are sentenced and transferred to HOC is longer in Middlesex County compared to Essex or Hampden, by 26% and 88% respectively. This could be resulting in more sentences deemed time served and thus fewer short sentences admitted to HOC.
In sample counties, weapon offenses had the longest lengths of stay at HOCs.

Approximately 90% of weapon offenses were firearm related. The remainder were for carrying a dangerous weapon.
Felony property offenses account for the largest subset of the HOC population.

Over 1/3 of the HOC population have a misdemeanor as their most serious committing offense.

*6% of HOC records could not be matched to obtain information on offense - Total N = 5,099
CSG Justice Center analysis of FY2014 Parole Board’s SPIRIT HOC data.
Approximately 40% of HOC populations in sample counties were incarcerated for property or motor vehicle (MV) offenses.

HOC POPULATION SNAPSHOT

N = 5,099

Committed on a Violation (no new offense at commitment)

- 18-24: 23%
- 25-34: 25%
- 35-44: 23%
- 45+: 20%

*6% of HOC records could not be matched to obtain information on offense.
CSG Justice Center analysis of 2014 Parole Board’s SPIRIT HOC data.
Data for this analysis was extracted by DOC research staff to include sentence and offense information, admission and release types, length of stay, and supervision status for criminally sentenced admissions, releases, and snapshot populations. Criminal Offender Record Information (CORI) was also used for a reconviction analysis. CORI data was obtained from EOPSS using a batch file-matching process using individuals’ unique state identifier PCF number.
The DOC population has been declining for several years and is projected to continue to decline slightly over the next few years.

Despite declines in population, the annual budget for DOC has been increasing.
Admissions and releases to DOC have been close in number in four of the last five years.

### DOC CRIMINALLY SENTENCED ADMISSIONS AND RELEASES

ADDITIONAL CWOF ANALYSIS

Research Addendum Slides

Data for this analysis was provided upon request by the Massachusetts Trial Court and include all CWOF dispositions in FY2014 and probation sentences in FY2013. The recidivism analysis was conducted using data from EOPSS (CORI data for arraignment and conviction), the parole board (SPIRIT data for HOC incarceration), and the DOC (state prison incarceration). CORI data was obtained from EOPSS using a batch file-matching process using individuals’ unique state identifier PCF number. In addition to a re-arraignment and reconviction analysis, CORI data was used to identify the final disposition of CWOF cases and whether violations occurred during the CWOF period.
The majority of CWOF dispositions end in dismissal

Sentencing analysis in April presented information on **31,943** CWOF dispositions in FY2014.

**Additional findings:**

- Over three-quarters of CWOF dispositions in FY2014 ended as a **dismissal**, 4% ended in a commitment, and nearly a quarter are ongoing as of May 2016.
- 41% of CWOF dispositions had a violation notice or finding.
- 31% of CWOF dispositions had a default warrant for a failure to appear.

---

CSG Justice Center analysis of 2014 CWOF and CORI data.
One-quarter of CWOF dispositions were re-arraigned in one year.

**ONE-YEAR RE-ARRAIGNMENT, RECONVICTION, AND INCARCERATION RATES FOR FY2014 CWOF DISPOSITIONS AND FY2013 PROBATION SENTENCES**

**FY2014 CWOF dispositions**
- **N = 30,363***
- **Convicted**: 9%
- **Re-arraigned**: 25%
- **DID NOT RETURN**: 75%

**FY2013 Probation sentences**
- **N = 15,079***
- **Re-arraigned**: 35%
- **DID NOT RETURN**: 65%

*First disposition or sentence of the year selected; FY2013 was the latest year of sentencing data available. CSG Justice Center analysis of 2014 CWOF, 2013 sentencing, CORI, Parole SPIRIT HOC, and DOC data.
A larger portion of sentences to probation were for a person or property offense than CWOF dispositions, which were more often a motor vehicle or OUI offense.

Because presentations are not subject to the same rigorous review process as other printed materials, the statements made reflect the views of the authors, and should not be considered the official position of the Justice Center, the members of The Council of State Governments, or the funding agency supporting the work.
This project was supported by Grant No. 2013-ZB-BX-K002 awarded by the Bureau of Justice Assistance. The Bureau of Justice Assistance is a component of the Department of Justice’s Office of Justice Programs, which also includes the Bureau of Justice Statistics, the National Institute of Justice, the Office of Juvenile Justice and Delinquency Prevention, the Office for Victims of Crime, and the SMART Office. Points of view or opinions in this document are those of the author and do not necessarily represent the official position or policies of the U.S. Department of Justice.
